

**E-learning v pregraduální výuce zubního lékařství na LF MU a výhled
na strukturovanou sekci zubního lékařství v rámci publikační
platformy MEFANET**

**E-learning in undergraduate dental education at Faculty of Medicine of
Masaryk University and a view of the dental section in the MEFANET e-
publishing platform**

Bartáková S., Schwarz D., Šnábl I., Komenda M., Vaněk J., Dušek L.

Several projects focused on e-learning support in the Faculty of Medicine of Masaryk University in recent years, initiated the creation of a wide range of multimedia teaching aids and electronic publications. The individual works as well as their association to specific subjects within the curriculum of dental medicine degree will be presented. A separate educational site zubnilekarstvi.cz was planned to make the created teaching materials accessible. Since publishing procedures related to the official educational web portal (portal.med.muni.cz, ISSN 1801-6103) has already been established and verified by practice, the electronic teaching materials will be published there - at the home educational web portal of the Faculty of Medicine of Masaryk University. Further, the authors deal with a partial modification of the MEFANET e-publishing platform (portal.mefanet.cz) so that it will enable presenting electronic teaching materials for dental medicine within a more detailed structure of sub-disciplines and specializations of dental medicine.
